

LA Excelsior Aggressive Portfolio

As at 31 October 2011

Portfolio objective

The Portfolio aims to produce a risk/return profile consistent with that required by an aggressive investor. Aggressive investors are long-term investors who want high capital growth. Substantial year-to-year fluctuations in value are acceptable in exchange for a potentially high long-term return.

Portfolio facts

Portfolio manager	Robin Eagar
Management company	STANLIB
Launch date	March 2006
Portfolio type	Single Manager
Portfolio size	R 618,282,372
Benchmark	90% FTSE/JSE All Share Index 10% FTSE/JSE All Bond Index
Additional information	The Excelsior Lifetime Phase 5 mirrors the performance of this portfolio

The performance of the portfolio benchmark over time provides the basis against which the portfolio manager will be measured.

Please consult the current portfolio grid for any current restrictions on the availability of portfolios for new business and switching.

Who should invest in this portfolio

This portfolio is suited to the investor who:

- wants to achieve real returns of 4.5% p.a. over their investment horizon after the deduction of tax but before any Liberty Life charges and fees have been deducted
- has an investment horizon of at least 10 years
- is prepared to accept significant fluctuations in returns from year to year

Risk profile

No adjustment has been made to the above risk profile for the guaranteed version of the portfolio. If guarantee is selected on the portfolio, then the risk profile will be lower, provided the investor remains in the guaranteed portfolio for the duration of its guaranteed term.

What return is this portfolio designed to achieve?

Expected return*	CPI + 4.5%
Investment horizon	10 years

The Consumer Price Index (CPI) measures the increase in the price of the basket of goods an average family would buy over a specified period of time.

* Expected return is after the deduction of tax but before any Liberty Life charges and fees have been deducted.

Quarterly commentary (1st quarter)

The prudent stock selection strategy taken within the equity portfolio has been the main detractor from performance over the past 12 months, and has impacted the longer dated performance numbers given the extent of high beta stocks outperformance over those periods. Over the quarter, the portfolio was overweight International Equities and Telecommunications, as well as an underweight in Insurance, which were the main contributors to negative performance. The sectors that did contribute to performance were overweight's in Retail & Personal Household Goods, and an underweight in Industrial Goods & Services.

The 12-month return for the bond component was higher than that of the benchmark All Bond Index by a margin of 0.75%. Corporate bond spreads continued to compress during the fourth quarter, thereby benefiting the portfolio. During the fourth quarter, the portfolio's position in the 12+ area was increased further on expectations of a flatter yield curve. Major yield curve trades were an increase in the overweight position in the 12+ area, which was funded by cash and sales of shorter dated instruments. Moving up the yield curve has an added advantage of higher yield pickup. The modified duration of the portfolio was increased from 6.0 years to 6.5 years.

Performance

Returns

	3 Months	6 Months	1 Year	2 Years	3 Years	5 Years
Taxed	5.23%	2.70%	11.29%	12.60%	14.62%	9.40%
Retirement Annuity	5.61%	3.01%	12.23%	13.10%	15.06%	9.62%
Untaxed	5.55%	2.94%	12.24%	13.10%	15.24%	9.72%
Company	5.01%	2.75%	10.97%	12.43%	14.40%	9.40%
Benchmark	4.99%	0.83%	9.28%	13.69%	18.06%	9.84%
Inflation	1.45%	2.68%	5.69%	4.33%	4.93%	6.98%

Please Note: The above investment returns are after four-fund tax has been deducted but before any Liberty Life charges have been deducted, with applicable distributions reinvested and are on a sell-to-sell basis. They are applicable to single contributions and are for Excelsior 300 and 500 Series products for the periods above. Investment returns for periods less than one year are not annualised.

Return volatility

The graph below indicates the volatility of annual investment returns for an investor in this portfolio. The highest and lowest annual returns over 1, 5 and 10 year intervals have been shown based on the portfolio being invested in the benchmark. The calculations are based on investment returns during the 20 years to 01/01/2007.

No allowance has been made for the impact of tax or charges and fees in calculating these returns.
