- wants to primarily in companies, which are involved in mining, mining financial, metals, minerals and energy
- has an investment horizon of at least 10 years
- is prepared to accept significant fluctuations in returns from year to year

Risk profile

Conservative	Moderate	Aggressive
--------------	----------	------------

No adjustment has been made to the above risk profile for the guaranteed version of the portfolio. If a guarantee is selected on the portfolio, then the risk profile will be lower, provided the investor remains in the guaranteed portfolio for the duration of its guaranteed term.

What return is this portfolio designed to achieve?

Expected return*	CPI + 4.5%
Investment horizon	10+ years

The Consumer Price Index (CPI) measures the increase in the price of the basket of goods an average family would buy over a specified period of time.

* Expected return is after the deduction of tax but before any Liberty Life charges and fees have been deducted.

Quarterly commentary (3rd quarter)

Strong stock selection has contributed to improved quarter and 12 month performance.

The overweight positions in energy through investment in Exxaro and Sasol, contributed positively. The underweight positions in the struggling platinum sector, especially Anglo Platinum, also helped relative returns. This trend is expected to continue as future growth out of Europe remains very uncertain. The holding in Newgold gave a diversification benefit in a down market as global uncertainty intensified during the quarter.

The weighting in Exxaro was increased at the expense of Kumba. We also switched out of Anglo platinum into Impala platinum as we believe in the better relative value. Weighting towards Anglo American and African Rainbow minerals was also increased based on their attractive valuations.

The portfolio remains concentrated with the top ten shares comprising over 90% of the portfolio. The biggest overweight positions are in Exxaro, African Rainbow Minerals and Arcelor Mittal, with the most underweight positions directed to BHP, Billiton and Goldfields.

Performance

Returns

	3 Months	6 Months	1 Year	2 Years	3 Years	5 Years	8 Years
Taxed	4.29%	-3.09%	5.95%	6.19%	11.05%	6.44%	16.87%

Return volatility

The graph below indicates the volatility of annual investment returns for an investor in this portfolio. The highest and lowest annual returns over 1, 5 and 10 year intervals have been shown based on the portfolio being invested in the benchmark. The calculations are based on investment returns during the 20 years to 01/01/2007.

No allowance has been made for the impact of tax or charges and fees in calculating these returns.
