## What return is this portfolio designed to achieve?

Expected return*	CPI + 4.5%
Investment horizon	10 years

The Consumer Price Index (CPI) measures the increase in the price of the basket of goods an average family would buy over a specified period of time.

\* Expected return is after the deduction of tax but before any Liberty Life charges and fees have been deducted.

## Quarterly commentary (3rd quarter)

The 3rd quarter of 2011 has been a volatile period for global markets. Global equities were the most significant laggard of performance and underperformed fixed income, hedge funds and cash. The weaker Rand, however, aided performance in local terms and helped global assets to mark positive returns for the period under review.
